My experience in this position has played a vital role in my development both personally and professionally.

- Collected and recorded daily behavioral data
- Technology management and troubleshooting within classroom
- Aided in the development of classroom curriculum
- Part of the campus emergency response team

## PROJECTS

### Thirsty's - Application

The application allows users to find breweries based on their current location. Thirsty's utilized HTML, CSS, and materialized for front-end development. The back-end applies Javascript and third party API's for handling information.

### Team Collaborator - Application

The application mimics social media platforms that allows the user to store, edit, create, and allows for collaboration at the users convenience. Team Collaborator makes use of BULMA CSS framework for front-end development. MySQL and Seaqualize were utilized for the back-end database. Combined with Node.js and Express.js implemented on server side. Cookies were used for collecting user information and JavaScript was the adhesive for the application. This project also follows the standard MVC Architectural structure.
